Juan David Rodriguez Castelblanco

Software Developer | JavaScript · React · Node.js · AWS · Java

Ontario, Canada | jdrcastel@gmail.com | jdrcastel.github.io/jdrcastel | linkedin.com/in/jdcastel | github.com/jdrcastel

Summary

Software developer with strong JavaScript and front-end skills (React, Next.js, TypeScript) who also built a Node.js microservice on AWS with Docker and CI/CD (AWS Certified Cloud Practitioner). Now designing Casshy, a gamified personal-finance app, and building IncidentHub to grow into Java, Spring Boot and AI integrations. At OpenText I troubleshoot production incidents on enterprise SaaS platforms and am moving into Tier-3 support.

Experience

Technical Support Specialist September 2025 - Present
OpenText *Waterloo, ON*

- Provide production support to global enterprise customers on OpenText SaaS products (LoadRunner Enterprise, ALM/QC, Octane/ValueEdge), currently moving from Tier-2 into Tier-3 escalations.
- Troubleshoot authentication (SSO, OAuth 2.0), integration and performance incidents using Linux/Windows, SQL, Jenkins and system logs, and analyze ticket data to find root causes and recurring issues.
- Partner with Operations, Engineering and R&D in an SLA-driven environment to resolve complex escalations.

Application Developer (Internship) September 2022 - April 2023
Government of Ontario *Toronto, ON*

- Built an internal web page with React.
- Worked with developers and designers to fix bugs, deliver new features, and improve user experience.

Projects

Casshy (In Progress) | *TypeScript, Next.js, NestJS, PostgreSQL, Prisma, Turborepo, Rive, Docker*

- Designing a gamified personal-finance web app for Canada; users care for Casshy, a coin mascot that evolves with fair XP.
- Phase 0 done (vision, ADRs); money stored as integers, versioned Canadian tax rules, pure domain packages, WCAG AA.

IncidentHub (In Progress) | *Java, Spring Boot, PostgreSQL, Spring Data JPA, Spring AI, JUnit, Docker, AWS*

- Learning Java, Spring Boot and AI integrations by building a REST API for support incidents with SLA breach detection.
- Built phase by phase: core API on PostgreSQL, JWT security, JUnit tests, LLM-based ticket triage, Docker, CI/CD, AWS.

Enterprise Microservice Platform | *Node.js, Express.js, AWS (Cognito, S3, DynamoDB, ECS), Docker* | API code | UI code

- REST API on AWS to store and convert text and image fragments, with Cognito JWT auth, S3 and DynamoDB.
- CI with ESLint, Jest and Hurl integration tests; CD builds the Docker image, pushes it to ECR and deploys to ECS.

Timer SaaS Team (Web Extension) | *JavaScript, Manifest V3* | Code

- Web extension for the OpenText SaaS team that counts down a saved break or lunch and sets the agent back to Available.
- Countdown, JSON log export and timer recovery after restarts; fixed a 15-to-30-minute form reset bug.

Skills

Languages: JavaScript (ES6+), TypeScript, HTML/CSS, SQL, Java, Bash
Frontend: React, Next.js, Redux, Responsive UI
Backend & APIs: Node.js, Express.js, RESTful APIs, Microservices, OAuth 2.0
Cloud & Delivery: AWS (ECS, ECR, S3, DynamoDB, Cognito), Docker, GitHub Actions, Jenkins, CI/CD, Linux
Databases: SQL, MongoDB, SQL Server, DynamoDB
Tools: GitHub Copilot, Git/GitHub, Jest, Agile
Currently Learning: NestJS, Prisma, Spring Boot, PostgreSQL, JUnit; agentic AI (Claude Code, Codex), LLM integrations

Education

Computer Programming and Analysis (Advanced Diploma) January 2021 - January 2024
Seneca Polytechnic *Toronto, ON*
Relevant Coursework: Java, Object-Oriented Programming, Cloud Infrastructure, Database Systems, Data Structures

Certifications and Achievements

- AWS Certified Cloud Practitioner
- Platzi: Advanced Algorithms, REST API with JavaScript, and Object-Oriented Programming
- President's Honour List, Summer and Fall 2023, Seneca Polytechnic
- Hispanotech volunteer: organized technical workshops and networking sessions for Latin American tech professionals.
