Juan David Rodriguez Castelblanco

Full-Stack Developer | MERN · Next.js · Java & Spring Boot · AWS · DevOps

Ontario, Canada | jdrcastel@gmail.com | jdrcastel.github.io/jdrcastel | linkedin.com/in/jdcastel | github.com/jdrcastel

Summary

Full-stack developer strongest in JavaScript and TypeScript (MongoDB, Express, React, Node.js, Next.js), with Java and Spring Boot for backend services. AWS Certified Cloud Practitioner who ships containerized REST services on AWS with Docker and CI/CD. At OpenText I troubleshoot production incidents on enterprise SaaS platforms and am moving into Tier-3 support. I build with AI coding agents every day: Claude Code, OpenAI Codex and GitHub Copilot.

Experience

Technical Support Specialist September 2025 - Present
OpenText *Waterloo, ON*

- Provide production support to global enterprise customers on OpenText SaaS products (LoadRunner Enterprise, ALM/QC, Octane/ValueEdge), currently moving from Tier-2 into Tier-3 escalations.
- Troubleshoot authentication (SAML SSO, LDAP, OAuth 2.0), integration and performance incidents using Linux/Windows, SQL, Jenkins and system logs, and analyze ticket data to find root causes and recurring issues.
- Partner with Operations, Engineering and R&D in an SLA-driven environment to resolve complex escalations.
- Built an internal Chrome extension in JavaScript that the SaaS support team uses to track case status and timing.

Application Developer (Internship) September 2022 - April 2023
Government of Ontario *Toronto, ON*

- Built internal web apps with Microsoft Power Apps and automated business workflows with Power Automate.
- Worked with developers and designers to fix bugs, deliver new features, and improve user experience.

Projects

Enterprise Microservice Platform | *Node.js, Express.js, AWS (ECS, ECR, Cognito, S3, DynamoDB), Docker, CI/CD*

- Developed a RESTful CRUD microservice on AWS with Cognito authentication and S3/DynamoDB storage over HTTPS.
- Containerized the service with Docker, pushed images to ECR and deployed to ECS through a CI/CD pipeline.

DevOps Toolbox Portfolio | *TypeScript, Vitest, GitHub Actions, AWS VPC, Terraform*

- Built browser tools for real support and DevOps tasks: a JWT/SAML SSO inspector, a Dockerfile linter, and an AWS VPC subnet planner that generates Terraform.
- Shipped with GitHub Actions CI/CD (type check, unit tests, build, deploy); failing tests block the deploy.

Chronicle App (Social Journal Application) | *MongoDB, Express.js, React, Node.js, Next.js, Redux*

- Built a full-stack, multi-tenant social journal app with a Node.js and Express.js REST backend on MongoDB.

Skills

Languages: JavaScript (ES6+), TypeScript, Java, SQL, HTML/CSS, Bash
Frontend: React, Next.js, Redux, Responsive UI
Backend & APIs: Node.js, Express.js, Spring Boot, RESTful APIs, Microservices, AWS Cognito Authentication
Cloud & DevOps: AWS (ECS, ECR, S3, DynamoDB, Cognito, Lambda, IAM, VPC), Docker, GitHub Actions, Jenkins, CI/CD, Linux
Databases: MongoDB, PostgreSQL, SQL Server, DynamoDB
AI & Tools: Claude Code, OpenAI Codex, GitHub Copilot, Git/GitHub, Vitest, Agile, Salesforce
Currently Learning: Kubernetes, Terraform

Education

Computer Programming and Analysis (Advanced Diploma) January 2021 - January 2024
Seneca Polytechnic *Toronto, ON*
Relevant Coursework: Java, Object-Oriented Programming, Cloud Infrastructure, Database Systems, Data Structures

Certifications and Achievements

- AWS Certified Cloud Practitioner
- Platzi: Advanced Algorithms, REST API with JavaScript, and Object-Oriented Programming
- President's Honour List, Summer and Fall 2023, Seneca Polytechnic
- Hispanotech volunteer: organized technical workshops and networking sessions for Latin American tech professionals.
